Public consultation on a new framework for standard-essential patents

Introduction

In view of the discussions related to the licensing of standard essential patents ("SEPs"), the Commission announced in its Action Plan on Intellectual Property of November 2020 that it would consider a reform to ensure an efficient framework for SEP licensing. This public consultation aims at seeking the views of stakeholders on various questions that are important in developing such future framework. Those questions pertain to the most important elements of such an efficient framework, namely transparency, the concept of licensing on fair reasonable and non-discriminatory ("FRAND") terms and conditions, including the level of licensing and enforcement.

All stakeholders are invited to provide their views. We are particularly interested to get the views of SEPs holders, SEP implementers, patent attorneys, legal practitioners, academics, patent pool administrators, industry associations, start-ups and SMEs, standard setting organizations ("SSOs"), also referred to as standard developing organizations ("SDOs"), consultants, policy makers and any other stakeholders that have experience with SEPs.

The Commission will publish all contributions to this public consultation. You can choose whether you would prefer to have your details published or to remain anonymous when your contribution is published. For the purpose of transparency, the type of respondent (for example, ‘business association, ‘consumer association’, ‘EU citizen’) country of origin, organisation name and size, and its transparency register number, are always published. Your e-mail address will never be published. Opt in to select the privacy option that best suits you. Privacy options default based on the type of respondent selected.

**Contribution publication privacy settings**

The Commission will publish the responses to this public consultation. You can choose whether you would like your details to be made public or to remain anonymous.

- **Anonymous**
  
  Only organisation details are published: The type of respondent that you responded to this consultation as, the name of the organisation on whose behalf you reply as well as its transparency number, its size, its country of origin and your contribution will be published as received. Your name will not be published. Please do not include any personal data in the contribution itself if you want to remain anonymous.

- **Public**
  
  Organisation details and respondent details are published: The type of respondent that you responded to this consultation as, the name of the organisation on whose behalf you reply as well as its transparency number, its size, its country of origin and your contribution will be published. Your name will also be published.

I agree with the personal data protection provisions

I. General questions

1. (If the contribution is given as a company) I am
   - SEP holder
   - SEP holder and implementer of a standard
   - Implementer
   - Other (please indicate)
If other, please indicate here

Representing RTOs as SEP holder organisations

2. Do you consider that the current legal framework for SEPs[1], provides sufficient legal protection against “hold-out” (broadly opportunistic behaviour by SEP implementers such as delaying the conclusion of a licence for as long as possible)?

- Fully agree
- Somewhat agree
- Neutral
- Rather disagree
- Fully disagree
- No opinion / cannot answer

Please explain your answer

See EARTO's papers on SEPs:

3. Do you consider that the current legal framework for SEPs provides a sufficient legal protection against “hold-up” (broadly opportunistic behaviour
by SEP holders such as using their market power to extract excessive rents or terms from implementers)?

- Fully agree
- Somewhat agree
- Neutral
- Rather disagree
- Fully disagree
- No opinion / cannot answer

Please explain your answer

700 character(s) maximum

Explanations are in EARTO’s paper cited in comment for question 2. Moreover, EARTO is in line with US AUTM on this subject matter: https://autm.net/getmedia/f416f0fe-d7da-4195-b120-e7df5b7e0507/AUTM-Comments-on-2021-SEP-Policy-Statement-(Docket-ATR-2021-001).pdf. This AUTM position (February 4, 2022) is a response to a consultation launched by the DoJ in the USA, December 13, 2021, which is similar to that of the present consultation of the Commission. EARTO strongly advises the Commission to take into account the results of this consultation in the USA so that for reasons of reciprocity, European regulations will not be less favorable to innovation than similar regulations in the USA.

4. What is the impact of the current framework for SEP licensing on start-ups and SMEs?

- It does not impact start-ups and SMEs differently than other stakeholders
- It is more favourable to start-ups and SMEs
- It puts start-ups and SMEs at competitive disadvantage
- Other, please specify

Please specify here

700 character(s) maximum

The current regulatory framework allows for a good balance between technology providers (SEP holders) and implementers. Given that SMEs and start-ups can be either technology providers or implementers, changing this balance would disadvantage some SMEs and start-ups."
Please note that, due to their size start-ups and SMEs often must rely on outside specialized counsel. Either in their role as technology provider or as implementer. As such they may encounter somewhat higher costs than larger stakeholders. Even where this may lead to some minor disadvantages to these stakeholders, that should be addressed by capacity building efforts or financial grants rather than by means of legislation.

5. What is the impact on your business of recent litigations in courts in different jurisdictions, including China, Germany, India and the UK?[1]

No impact. Explanations are in EARTO papers:

Please explain your answer. Please also explain whether your answer would change on the basis of the different type of sectors to which your SEPs are licensed (e.g. IoT, automotive)

Recent litigations did not impact RTOs business which is to transfer knowledge to the market mainly through the Intellectual Property and Licensing system. This business is the same whether the patents are SEPs or not and recent litigations in courts for SEPs, whose results are on average of the same nature as patent disputes that are not SEPs, did not change RTOs technology transfer policies. Moreover, there are proportionally no more disputes concerning SEPs than disputes concerning non-SEPs.

II. Licensing process

II.a) Questions for all stakeholders

6. In your experience, in licensing negotiations, how many SEPs are discussed technically between an implementer and a SEP holder with a large portfolio?

- < 20
- 20-50
- 50-100
- 100-200
- 200-400
- > 400

Comments

700 character(s) maximum
All cases are possible. There is no typical number for such technical discussions. In bilateral licensing
discussions with regard to a small number of patents usually ALL patents to be licensed will be scrutinized
by the prospective licensee. In such cases, the license fee will be greatly dependent on the number of
actually licensed patents and hence the additional effort is considered worthwhile. However, where SEP’s
are licensed out by a patent pool, all patents will have been independently evaluated on essentiality AND the
relative weight of each patent in the licensed portfolio will be rather small. Therefore implementers usually do
not scrutinize individual patents in the portfolio.

II.b) Questions for SEP implementers

7. Have you ever sought a licence before being approached by a SEP holder?
   ○ Yes
   ○ No
   ○ No opinion / cannot answer

Please explain your answer

700 character(s) maximum

For implementers only. RTOs are generally not implementers.

8. If yes, how did that impact on your business?
   ○ It had no impact
   ○ It helped enter a new market
   ○ It caused me delay of the time-to-market
   ○ It prevented me from entering an new market
   ○ It gave me competitive advantage
   ○ It put me at competitive disadvantage
   ○ Other, please specify

Please explain your answer

700 character(s) maximum

For implementers only. RTOs are generally not implementers.

9. How much time after the first implementation of a standard in your
   products are you, on average, contacted by a SEP holder with an invitation to
   take a licence?
   ○ less than 6 months
   ○ 6 – 12 months
   ○ 1 – 2 years
2 – 4 years
4 – 6 years
More than 6 years
I was never approached

Please explain your answer. In particular, please explain whether you find that there are differences depending on the type of products or sector (e.g. IoT, automotive)

For implementers only. RTOs are generally not implementers.

10. What would be the main reason for you to request a licence?
☐ To be able to compete with other suppliers
☐ Not to infringe a SEP without a licence
☐ To be able to indemnify my customer
☐ To have legal certainty over my costs and plan my business activities
☐ To be able to carry our R&D and develop new products
☐ To be able to sell my products
☐ Other (please specify)

Please explain your answer

700 character(s) maximum

For implementers only. RTOs are generally not implementers.

11. What are the average costs you incur for estimating your SEPs exposure per product that you want to bring on the market? These costs include cost for searching patent databases on enforceability, validity and ownership of the patent, assessing the essentiality of the patents, whether there is an infringement, the potential number of true SEPs and the share of the individual SEP holders in those.
☐ < 10.000 euros
☐ 10.000-50.000 euros
☐ 50.000-100.000 euros
☐ 100.000-250.000 euros
☐ 250.000-500.000 euros
☐ > 500.000 euros
12. What is the main effect for SEP implementers, in particular start-ups and SMEs, of the costs involved in licensing SEPs (search, negotiation and litigation costs)?

- I look for alternatives (e.g. not using standardised technology or royalty free standards)
- I go out of business/change business
- I become less competitive
- I settle as quickly as possible for a SEP licence, because it is cheaper than litigation
- I take licence only if absolutely necessary
- I increase final price to my business or retail customers
- I ask my suppliers to indemnify me for possible patent infringement
- Cannot answer / not applicable
- Other, please specify

Please explain your answer

700 character(s) maximum

For implementers only. RTOs are generally not implementers.

II.c) Questions for SEP holders

13. What are top three reasons for licensing/having SEPs?

- It is our main source of income
- For defensive purposes/better bargaining power
- For cross licensing
- For return on investment in R&D
- For continuation of future participation in standardisation
- Other, please specify….

Please explain your answer

700 character(s) maximum

For implementers only. RTOs are generally not implementers.
RTOs, not-for-profit organisations, do not exploit SEPs directly e.g. by selling products or rendering services, but indirectly by licencing to undertakings. As royalties is an important issue, it is neither our main source of income, nor a goal per se, as our goal per se is to carry out efficient technology transfer mainly through the Intellectual Property and Licensing system. Royalties are important to cover the patent costs and because we use royalty earnings to fund new RDI programs and to reward researchers for the attention they bring to the economic impact of their work. Generally, the RTOs work with the taxpayers money. We have the obligation to use the public investment efficiently.

14. On average, how much time after publication of a standard do you first start inviting SEP implementers to take a license for applications known at the time of its adoption?

- less than 6 months
- 6 – 12 months
- 1 – 2 years
- 2 – 4 years
- 4 – 6 years
- More than 6 years
- Never

Please explain your answer

700 character(s) maximum

All cases are possible, cannot provide a meaningful average. As RTOs are research organisations carrying out RDI projects from intermediate TRL levels (1-3) to high TRL levels (above 4), and as the licensing of a technology depends on the TRL level, all cases are possible. In the early stage of a standard, these SEP’s are often licensed out bilaterally by the RTOs themselves. Varying duration of SEP implementers taking a licence is not due to delays that are specific to the SEPs FRAND licence negotiation process, but is mainly caused by the varying TRL level of the technology. In later stages, when the number of implementers rises sharply, SEP licensing is often transferred to patent pools.

15. Do you contact all known SEP implementers from the selected category?

- Yes
- No
- No opinion / No answer

Please explain your answer

700 character(s) maximum

Not relevant for RTOs.
16. What percentage of these SEP implementers reply within a year after sending the first letter?

- < 25%
- 25-40%
- 40-55%
- 55%-70%
- 70-85%
- > 85%
- It depends (please explain)

Please explain

700 character(s) maximum

Not relevant for RTOs.

17. What percentage of the SEP implementers that reply take a license without litigation?

- < 25%
- 25-40%
- 40-55%
- 55-70%
- 70-85%
- > 85%
- It depends (please explain)

Please explain

700 character(s) maximum

Not relevant for RTOs.

18. On average, how much time after your first letter do implementers take a licence?

- Less than 6 months
- 6-12 months
- 1-2 years
- 2-4 years
- 4-6 years
- More than 6 years
III. Problems related to SEP licensing

III.a) Question for all stakeholders

19. What problems do you encounter when it comes to SEP licensing?

<table>
<thead>
<tr>
<th>Problem</th>
<th>Strongly disagree</th>
<th>Disagree</th>
<th>Neutral</th>

<tr>
<td>Other (please specify)</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Please explain your answer. Please provide information on particular problems start-ups and SMEs may face.

1000 character(s) maximum

Not relevant for RTOs.
RTOs do not encounter specific problems when it comes to SEP licensing. Licensing in general is not an easy task and must be conducted with professionalism and seriousness, taking into account the interest of both parties.

Therefore, response to abovementioned items are irrelevant, except for item “hold-up/unavailability of a licence” where EARTO’s response is: fully disagree. As RTOs are non for profit organisations with a public mission to transfer their knowledge to the economy, the concept of patent hold up is not relevant at all.

III.b) Questions for SEPs implementers

20. Under which circumstances would you consider not using a certain standard? Question of particular relevance for start-ups and SMEs.

<table>
<thead>
<tr>
<th>Circumstances</th>
<th>Strongly disagree</th>
<th>Disagree</th>

<td></td>
</tr>
<tr>
<td>Buy time by professing willingness to engage in constructive licensing negotiations - even as behaviour suggests otherwise</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Table counter-offers that are obviously unreasonable and unacceptable for the rights holder (e.g. a licensing rate of just 0.001 per cent per patent family)

Table a counter-offer only once litigation has been initiated

Refuse to enter into a global licence agreement despite having a global business for products that use standards

Redirect the SEP holder to upstream suppliers for licences

Redirect the SEP holder to a subsidiary or holding company

Insist repeatedly that the licence offer is not FRAND without providing substantive arguments to demonstrate why

Refuse to accept licence terms that have been confirmed by an EU court to be FRAND, and that are relevant and comparable for that implementer.

Other (please specify)

---

**Comment**

*700 character(s) maximum*

For RTOs, licensing negotiations on standard-essential patents is no different than licensing negotiations on non-standards-related patents. In proportion to the number of licenses, there are no more disputes during negotiations on SEPs patents than in others. Moreover, and more generally, in proportion there are no more lawsuits related to SEPs than lawsuits related to patents that are not SEPs.

As part of their public mission of technology transfer, if an implementer had a "hold out" type behavior, the RTOs would seek other solutions to license their patents, including outside the standard.

Therefore, abovementioned issues are not relevant to RTOs.

---

**IV. Transparency**
SEPs play an increasing role in the digitalisation of the economy in many sectors and need to be dealt with by multiple players who are unfamiliar with the world of SEPs, including start-ups and SMEs. This shift may require adaptations to the current approach to SEPs, in an effort to enhance transparency, predictability and trust.

IV.a) Questions for all stakeholders

23. In your view, which of the information below should the SEP holder provide publicly?

Comment. Please indicate which information is of particular relevance to start-ups and SMEs.

For RTOs, lack of transparency is not an issue in SEP Licensing. So the response to all the questions in table in 23, is : disagree. Moreover, many items in the list , if applied, would slow down negotiations and slow down the diffusion of innovation.

For SMEs : applying the items would seriously harm start-ups and SMEs in the case they would be SEPs holder. Patents are very important to SMEs and start-ups in order to develop and compete against
established companies. Applying the proposed items would seriously harm their development and more generally harm the European innovation system.

Comment. Please indicate which information is of particular relevance to start-ups and SMEs.

*700 character(s) maximum*

The fact that an implementer provides this information makes it possible to verify its real intentions, depending on its business model. A fair and reasonable license fee should be dependent on the actual use of the licensed SEP and hence requires information from the implementer. This information is of the utmost importance for SMEs and start-ups that are SEP holders in order to be able to ensure that their interests are protected.

26. How useful would the existence of a confidential repository of licensing agreements be to help judges and arbitrators determine a FRAND rate?

- ☐ Not useful
- ☐ Somewhat useful
- ☑ Useful
- ☐ Very useful
- ☐ No opinion

Comment

*700 character(s) maximum*

We acknowledge that SEP licensing under FRAND conditions should indeed be non-discriminatory between the various licensees having similar usecases. In bulk licensing, e.g. via patent pools, standard fees are
usually applied. FRAND disputes often come into existence where the anticipate use by a prospective licensee deviates from the normal use case. This repository would only be helpful in those handful of specific cases. Such disputes could be better analysed by looking at their own merits than by simply comparing rates with earlier licenses. We feel that, judges and arbitrators have sufficient skills and information to analyse FRAND rates, which will be based on a case by case analysis.

27. If there should be a repository who should have access to such confidential repository of licensing agreements?

- Judges
- Arbitrators
- Mediators
- Public authorities
- Lawyers
- Trustees
- Other (please specify)

Comment

700 character(s) maximum

The question is not relevant for RTOs because their opinion is that such a repository is not useful. See comments for the other questions.

28. Under what conditions should access to the confidential repository of licensing agreements be granted? Please explain

1000 character(s) maximum

The question is not relevant for RTOs because their opinion is that such a repository is not useful. See comments for the other questions.

29. No licence agreement is the same. They are catered to the needs of the concluding parties and the agreed terms and rates may be influenced by elements other than merely SEPs. If there were an obligation to submit licensing agreements to a confidential repository and parties were obliged to “unpack” the complex licensing agreements, i.e. provide a clear picture of the agreed terms and conditions, which elements of the agreement would need to be explained in a form to be submitted to the confidential repository of licensing agreements, summarising those agreements?

- Parties
- Licensed SEPs
- Licensed product
V. Essentiality

V.a) Questions to all stakeholders

30. The SEPs legal framework does not provide for third party checks outside of court of patents declared essential to a standard. How useful would be to set up a system of essentiality checks?

- Useful. It provides more transparency and reduces licensing costs
- Useful, but only if it would be advisory and have no legal consequences
- Useful, but only if the assessors would have the required expertise and are totally independent
- Not useful. It is sufficient, if SEP owners were obliged to update their self-declarations (so as to remove declared SEPs that are no longer SEPs)
Not useful. It is sufficient, if SEP owners were obliged to submit claim charts confirmed by an independent third party

Not useful. It is sufficient to develop private solutions to identify declared SEPs that are clearly not a true SEP.

No opinion

Other, please specify

Comment

<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Comment. Please indicate any particular advantages or disadvantages for start-ups and SMEs.  

Third party essentiality checks would be very harmful for the diffusion of the innovation because it would lengthen the negotiations and lead to more disputes and lawsuits. In SEP licensing by patentpools a third party essentiality check is obligatory due to the effects of anti-trust law. In bilateral SEP licensing, there is no such need and it should be left to the prospective licensees to “check the goods before buying”. If a prospective licensee holds the opinion that a certain patent is not essential to a standard, it may conduct its own essentiality study, commission it from an independent third party, or refrain from taking a license. That should be done as the need arises not before.

32. If there were a legal obligation to conduct essentiality checks on all declared SEP families that SEP holders intend to license, how should those be made?

<table>

<td></td>
<td></td>
</tr>
<tr>
<td>Other (please specify)</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Third party essentiality checks would be very harmful for the diffusion of the innovation. In particular, it would harm the development of start-ups and SMEs that are SEPs holders and cause additional substantial costs in a phase where licensing revenue could normally not yet be expected. And, such essentiality study would have to be repeated with changing standards. Moreover, if such obligations would only be placed on formal standards and not on de facto standards, such obligations may skew the innovation ecosystem and encourage major players to set up their own de facto standardization fora. That should be strongly discouraged as not in the interest of EU industry.

33. If a system of third party essentiality checks would be in place, which authority/body would be best placed for doing such essentiality checks?

- The EPO
- The national patent offices
- Specialised law firms
- Other organisation, please specify
- A combination of the bodies listed in letters a, b, c or d. If so, please specify which bodies and why in your view both should be responsible for this task

None of them as EARTO's opinion is that essentiality checks by third parties would harm innovation in Europe and especially hinder the development of SMEs and start-ups that are SEP holders.

34. Please explain what are in your view the main challenges to set up such a system, in terms of complexity and/or costs.

The complexity and costs to set up such a system would be so huge that it would rather not be set up, as in addition it would harm innovation in Europe and especially hinder the development of SMEs and start-ups that are SEP holders. Public funding would be saved.

VI. FRAND

While there is no 'one size fits all' approach when it comes to FRAND terms and conditions, there may be some scope for increasing predictability.

VI.a) Questions for all stakeholders

Questions 35 to 39 refer to the so called “level of licensing” discussion. After a product covered by a patent right, has been sold by the patent owner or by others with the consent of the owner, the patent right is said
to be exhausted. In the SEPs context this means that if a SEP holder grants a licence to SEPs implemented in a component upstream, it will not be able to license the same SEPs downstream in a value chain. SEP holders, however, often license their SEPs at end product level for various reasons.[1] Exhaustion thus does not happen for implementers of the SEPs upstream. To address this, SEP holders often provide end product manufacturers with the right to “have” some of the components that are fitted into their products “made” by third-party suppliers (the so called “have-made” rights). The practice of licensing at end product level is being disputed. Some believe any implementer, regardless of its position in the value chain, may be entitled to obtain a licence, while others believe the SEP holder should be free to decide at what level of the value chain to license its SEPs.

[1] See ‘SEPs Expert Group – Contribution to the Debate on SEPs’, Part 3, Section 3.2

35. In your view, can a SEP holder refuse to licence in the following situations?

<table>
<thead>
<tr>
<th>Situation</th>
<th>Yes</th>
<th>No</th>
<th>No opinion</th>
</tr>
</thead>
<tbody>
<tr>
<td>An implementer asks for a licence for an application, for which the SEP holder has not yet sent any letter inviting any implementer to take a licence</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>An implementer asks for a licence for using an optional part of the standard, for which the SEP holder has not yet sent any letter inviting any implementer to take a licence</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>An implementer asks for a licence, the SEP holder is already licensing (or negotiating the licensing of) the application at another level of the value chain but has not provided “have made” rights to that implementer</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>An implementer asks for a licence, the SEP holder is already licensing (or negotiating the licensing of) the application at another level of the value chain and has provided the so called “have made” rights to that implementer</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>An implementer asks for a license for a limited number of products and the SEP holder prefers to avoid licensing costs by providing guarantees that it will not enforce its patents.</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Comment

700 character(s) maximum

36. How would you assess the following statements for the determination of the level in the value chain for licensing of a SEP?

<table>
<thead>
<tr>
<th>Statement with regard to a specific value chain</th>
<th>Strongly disagree</th>
<th>Disagree</th>
<th>Neutral</th>
<th>Agree</th>
<th>Strongly agree</th>
<th>No opinion</th>
</tr>
</thead>
<tbody>
<tr>
<td>Licencing could take place at every level of the value chain</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Licensing should take place at one level of the value chain only</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
The implementers in a value chain should be able to determine the level of licensing

The SEP holder is the only one who should be able to determine the level of licensing

Both SEP holders and implementers should determine the level of licensing

The level of licensing should be determined by the person who asks for a licence first. If an implementer asks first, implementers determine the level of licensing. If the SEP holder asks first, it determines the level of licensing.

Other (please specify)

Comment

The interest of the SEP holder, in particular when it is an RTO, is to license the SEPs because the transfer of technology is in the missions given to it by the Member State. It is therefore in the best position, including to respect the public interest as a not-for-profit organisation to determine the level of licensing, in the Public Interest.

It should also be noted that a fair and reasonable license fee should be related to the added value that the SEP contributes to the end user of the device or service that makes use of the SEP. Only in this way can overpricing as well as underpricing be avoided. A SEP licensor should be allowed to differentiate its license fees and license conditions according to such widely different use cases.

37. If licensing were taking place at one level of the value chain only, what could be some guiding principles for the determination of that level of licensing?

<table>
<thead>
<tr>
<th>Statement</th>
<th>Strongly disagree</th>
<th>Disagree</th>
<th>Neutral</th>
<th>Agree</th>
<th>Strongly agree</th>
<th>No opinion</th>
</tr>
</thead>
<tbody>
<tr>
<td>Licensing should take place at the end level product of the value chain</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Licensing should take place at a component (intermediate) level of the value chain</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Licensing should take place at the most upstream level of the value chain</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Licensing should take place at the level of the product that incorporates most functionalities of the standardised technology

Licensing should take place at the level of the product which main function is that of the standardised technology

Licensing should take place where the licensed technology affects a significant proportion of the value-inducing functionalities of the licensed product

Licensing should take place where the SEP holder is able to monitor in which application the licenced technology is used

Licensing should take place where the transaction costs are most efficient

Other (please specify)

Comment

1000 character(s) maximum

Not relevant for RTOs as they have strongly disagreed with this item. Again, such “silver bullet” does not exist and could lead to both underpricing and overpricing, dependent on its use by the licensee. Both would be detrimental to the EU innovation ecosystem.

38. If licensing were available at all levels of the value chain, how could the SEP holder ensure that there is no “double dipping”, i.e. no double payments for the same SEPs and licensed products?

1000 character(s) maximum

Not relevant for RTOs as they have strongly disagreed with this item. Please note, wrt patent pools it is quite common that prospective licensees inquire with the pool contributors whether any licenses have been granted to their suppliers. And indeed, this should be the primary responsibility of especially system integrators. Whether “double dipping” exists would in any case be dependent on their own choice of suppliers, their own purchasing conditions, and whether their suppliers have indeed taken a license on the required SEP’s for the anticipated use.

39. Provided that the FRAND terms and conditions differ per application, if a licence is given at an upstream level and the standard is used downstream in many different applications, how do/would can SEP holders in practice
monitor purely via the upstream licence the quantities sold for each application (i.e. end product sales)?

1000 character(s) maximum

As RTOs recommend that: The SEP holder is the only one who should be able to determine the level of licencing. This problem is thus avoided.
The question posed here demonstrates that EARTO’s answer is the best solution. If this situation would arise, then the only feasible solution would be to contractually oblige the upstream licensee to either keep track of all downstream use (via suitable contractual conditions with downstream users). That would enable a differentiated flow of royalties over the entire value chain from end-user to licensor. That would probably create a lot of administrative overhead and would also amount to the disclosure of confidential data between players in the value chain. This should be avoided.

40. How would you assess the following statements with regard to fair and reasonable terms and conditions (“FR TC”)?

<table>
<thead>
<tr>
<th>Statement</th>
<th>Strongly disagree</th>
<th>Disagree</th>
<th>Neutral</th>
<th>Agree</th>
<th>Strongly agree</th>

</tr>
</tbody>
</table>

Comment. Please indicate potential impact on start-ups and SMEs.

1000 character(s) maximum

Competition does not require multiple suppliers of a specific product or service. As long as there is at least one substitute product available, competition will ensue even if there is only one supplier of any particular product or service (e.g., one covered by one or more patents). Start-ups and innovative SMEs, as users of the standard, need exclusivity in order to compete with big companies.

42. What is the reasonable range of discounts that would not cause discrimination in the context of a licensing of a SEP?
### Type of discount

<table>
<thead>
<tr>
<th>Type of discount</th>
<th>Always discriminatory</th>

45. How important is it to have a fair process for the determination of a reasonable aggregate royalty for all SEPs relevant to a licensed product?

- Very important
- Important
- Neutral
- Not so important
- Not important

Comment

700 character(s) maximum

46. The aggregate royalty may be apportioned among the various SEPs or SEP portfolios based on an estimate of the declared SEP that are actually
essential ("true SEPs"). What could be an appropriate additional criterion for the apportionment of the aggregate royalty among the various SEPs or SEP portfolios?

- Number of “true” SEPs belonging to sections of the standard identified as of significant value
- Number of jurisdictions in which “true” SEPs are protected
- Number of significantly different claims
- Number of sections of the standard covered by “true” SEPs
- Man hours spent in contributing in the development of the standard at the SDO
- Forward citations[1]
- [1] A citation is a reference to a previous work (prior art) that is considered relevant to a current patent application. Forward citations are patents that cite a specific patent.

- Other, please specify

Comment

700 character(s) maximum
47. If there were an obligation to complete the “steps” provided in the Judgment of the Court of Justice of the European Union (“CJEU”) of 16 July 2015, Huawei v. ZTE[1] within certain time limits, which period would be reasonable? Please note that we ask for average reasonable time limits with due account taken of the fact that the analysis would have to be conducted on a case-by-case basis[2].

[2] The reasonable amount of time needed for the implementer to express its willingness to obtain a license may vary depending on a number of factors, such as the number of patents at issue, the complexity of the technology, the level of knowledge the implementer may have about the technology and other.

VII. Enforcement

The problems reported most by SEP holders and implementers are hold up and hold out. On the one hand, SEP holders claim that it is necessary to go to court in order to conclude a license agreement with an implementer. This takes time, involves significant costs and may not always be efficient to achieve a fair and reasonable compensation. On the other hand, implementers claim that willing licensees have difficulties to obtain licences at FRAND terms and conditions and fear abuse of a dominant position by SEP holders. How could we reduce litigation for both SEP holders and implementers?

VII.a) Questions for all stakeholders
51. What is the average cost for you of a dispute (advice and litigation costs) in court, excluding the value of the SEPs licenses and any damages?

All the questions in section VII are based on following statement written in the preamble for these questions: "The problems reported most by SEP holders and implementers are hold up and hold out." In line with EARTO's responses and comments to previous questions, and our opinion is that there are no more problems reported in SEPs licensing as in non SEPs licensing and as there are proportionally no more disputes concerning SEPs than disputes concerning non-SEPs, EARTO does not respond to these questions who seek to provide solutions where in reality there are not really big problems, in any case no more than for the licensing of non-SEPs, as the possible solutions may bring more problems.

52. What is the average cost of the dispute (advice and litigation costs) in arbitration, excluding the value of the SEPs licenses and any damages?

- ☐ Up to 500,000 euro
- ☐ From 500,000 euro to 1,000,000 Euro
- ☐ From 1,000,000 euro to 2,000,000 Euro
- ☐ From 2,000,000 euro to 3,000,000 Euro
- ☐ From 3,000,000 euro to 6,000,000 Euro
- ☐ From 6,000,000 euro to 10,000,000 Euro
From 10,000,000 to 20,000,000 Euro

☐ Above 20,000,000 Euro please specify

55. What would be a credible independent arbitration body for making FRAND assessments?

- WIPO Arbitration and Mediation Center
- (the future) Patent Mediation and Arbitration Centre of the Unified Patent Court
- The International Court of Arbitration of the International Chamber of Commerce (“ICC”)
- The London Court of International Arbitration (“LCIA”)
- An ad hoc arbitration from a list of impartial arbitrators endorsed by a public authority
- An independent EU body designated to conduct this function
- Other (please specify)

<td></td>
<td></td>
</tr>
<tr>
<td>Other (please specify)</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

58. What transparency requirements should be attached to arbitration on FRAND assessments?
The arbitral tribunal shall disclose the methodology used for the calculation of a FRAND rate

Information on the name of the parties and patent registration and application numbers

Information on specific licensing rates but no third party confidential information or other party confidential information shall be disclosed

Other (please specify)

**59. Should it be possible to request authorities to “report” on imports of unlicensed products, if some conditions are fulfilled[1]? This does not concern detentions of imports under the regular intellectual property rights’ enforcement procedures by customs.**

[1] Such conditions could for example be a proof that a SEP holder asked an implementer to take a licence, provided the necessary information on the SEPs concerned and its FRAND terms and conditions and the implementer did not respond.

- Yes
- No
- Depends (please explain)
- No opinion

61. If infringement of SEP is confirmed, the court may (i) order an injunction for the future and (ii) grant damages for the past. The injunction for the future would in principle lead the infringer to take a licence, if it wants to continue to sell its products. In that context, should the court be empowered (under certain conditions – see following question) to order the parties to submit any disagreement on the FRAND terms and conditions to arbitration.

- Yes
- No
- Depends (please explain)
- No opinion
